

Bug Report 1

Title: Search suggestions list fails to update when query changes quickly

Severity: Major

Priority: Medium

Component/Area: Product Search → Autocomplete Suggestions

Environment:

- Browser: Chrome 139 / macOS 13.6
- URL: <https://www.digikala.com/>
Test Data: Any fast-typed query (e.g., iph, then iphone)

Preconditions:

- User is logged in or logged out, homepage loaded.
Searchbar visible and functional.

Steps to Reproduce:

1. Click inside the **Search** bar.
2. Type quickly: iph → pause 0.5s → add one.
3. Observe suggestion dropdown.

Expected Result:

- Suggestions refresh in real time to match the updated query (iphone).
- Irrelevant results for the old query (iph) are discarded.

Actual Result:

- Dropdown **freezes with outdated results** from the partial query.
- Users must blur/focus the search box or press enter to refresh.

Impact / Risk:

- Users may assume no results exist and abandon the search.
- Creates friction in the most critical entry point of the shopping funnel.

Workaround: Manually hitting **Enter** reloads results, but suggestions remain stale.

Bug Report 2

Title: Adding multiple items to cart quickly results in inconsistent cart count badge

Severity: High

Priority: High

Component/Area: Shopping Cart → Add to Cart Button / Header Badge

Environment:

- Browser: Chrome 139 / macOS 13.6
- URL: <https://www.digikala.com/product/...>

Preconditions:

- User logged in.
- Product page accessible and marketable.

Steps to Reproduce:

1. On any product detail page, click **Add to Cart**.
2. Immediately click it again before the confirmation toast disappears.
3. Observe cart badge count in the header.

Expected Result:

- Cart badge increases by 2, matching the actual items added.
- Backend and UI remain in sync.

Actual Result:

- Cart badge increments only once (shows +1).
- On navigating to the cart page, the correct count (+2) is displayed.
- UI and backend are inconsistent, confusing the user.

Impact / Risk:

- Customers might think only one item was added and **retry unnecessarily**, inflating orders.
- Trust issue with cart accuracy.

Workaround: Refreshing page/cart syncs the count.
